

TURBINE VALVE SERVICES

The TRS Turbine valve service group can provide you with help and assistance with a variety of your plant needs. Our turbine valve service group specializes in steam and combined cycles turbine control, stop, throttle, and intercept valves. Valve repairs typically encompass field removal of the valve, shop disassembly and inspection, verification of OEM specifications and tolerances, repair or replacement of stems, gaskets, bolting, replacement or repair of discs, seats, seal areas and caps. Weld repair can include machining of damaged existing stellite, stainless underlay weld build up, pre-machining for stellite overlay, and final machining of stellite repaired surfaces.

Our Turbine Valve service group specializes in utility, power plant, and heavy industrial mechanical and boiler systems.
